

WV Medical – Home Health Initial Revision Request Updates

Please see addendum to the Home Health Training PowerPoint regarding corrections to HH cases in the Atrezzo system.

Page #6 will now read as follows:

Correcting Initial & Established cases

- Initial HH cases for FFS Medicaid members do not generate an authorization number; however, all disciplines/units/date spans are to match what is being entered into Atrezzo (Kepro system) to what is billed to Gainwell in order to meet EVV requirements.
- To correct an initial HH case (in which an auth number has not generated) you must select "Request authorization revision" and note clearly as to what disciplines are to be added, unit adjustments, or date extensions are required. Internal staff at Kepro will then make manual adjustments to your initial case.
- There is no change to how you will correct established cases. Providers will still submit a Copy for Correction for established and ABP initial cases in which an auth number has generated,
